SCRAM® **from AMS**

Continuous Alcohol Monitoring + House Arrest

An Expanded Vision

As the innovator of continuous alcohol monitoring (CAM) with the introduction of SCRAM® (Secure Continuous Remote Alcohol Monitor) in 2003, Alcohol Monitoring Systems, Inc. (AMS) set the industry standard and gave the criminal justice system a new way to manage alcohol offenders by holding them continuously accountable for their actions.

Now, AMS is using our experience and expertise gained from monitoring hundreds of thousands of offenders nationwide to create a whole new level in alcohol offender management. Introducing SCRAM$_X$® – the next generation of SCRAM – that adds house arrest functionality to our proven CAM solution.

The Next Generation

SCRAM$_X$ pairs the SCRAM ankle bracelet with a newly-designed base station that incorporates RF technology to detect an offender's presence in or absence from the home. With these two technologies integrated into one device, you can further extend the span and scope of your offender management programs – monitoring them 24/7 for drinking while simultaneously ensuring they are confined to their homes during certain hours of the day.

With the dual functionality of CAM and house arrest embedded in a single piece of equipment, SCRAM$_X$ eliminates the need to place offenders on separate devices to enforce both court-ordered conditions. Having both capabilities also gives you greater leverage to tailor sanctions that better fit the sentencing needs of your hardcore offenders.

Integrated Benefits

SCRAM$_X$ is the most comprehensive alcohol offender management tool on the market today because it:

- Increases accountability by detecting both alcohol consumption and an offender's presence in the home

- Streamlines operations and reduces workload by eliminating the redundancies of setting up and managing two separate devices

- Provides adjustable supervision models to manage offenders based on behavior

- Allows those offenders who are not a threat to the community when sober to earn jail credit for time served while being continuously monitored

The Power of X

However, SCRAM$_X$ is much more than just the product piece of the equation. The total SCRAM$_X$ solution also encompasses a wide range of programs tailored to various applications within the criminal justice system, as well as the world-class service portfolio delivered by our national network of Service Providers. The sum of these three components is what gives you the "Power of X" – the SCRAM$_X$ advantage.

SCRAM$_X$ – *Experience the Power of X*

Continuous Alcohol Monitoring (CAM)
Proven, Industry-leading Technology

24/7 alcohol detection.
- Takes readings every half hour
- Provides full data vs. a snapshot view
- Conclusively distinguishes between ingested and environmental alcohol

Increased offender accountability.
- Makes offenders continuously accountable for their actions
- Features industry-leading, anti-tamper technology using five sensors

Court acceptance and validation.
- Single source admissibility – no additional tests required
- Viewed by judges as accurate, reliable, and generally accepted
- Admissible in evidentiary hearings and court cases nationwide
- Fully backed by AMS, which stands behind SCRAM in court

Flexible, exception-based reporting.
- Customized testing, synchronization, and reporting schedules
- Date-and time-stamped readings assist reporting and analysis
- Exception-based reporting streamlines case management priorities
- Flags and graphically depicts:
  - Drinking events
  - Tamper or removal attempts
  - Equipment malfunctions

Evidence-based assessment, detection, and deterrence.
- Helps gauge offender drinking patterns and evaluate addiction levels
- Provides data to tailor individualized sanctions and treatment programs

Cost-effective, automated testing.
- Offers a low cost per test
- Requires no labor after installation or appointments to administer tests

Better outcomes and long-term results.
- Supports a 45% reduction in recidivism when used on repeat DUI offenders*
- Protects the public and promotes safer roads
- Provides an effective alternative to jail
  - Costs significantly less than incarceration
- Supports better responses to treatment
- Lets offenders maintain family obligations, hold jobs, and contribute positively to the community

House Arrest (HA)
Enhanced Functionality for a Comprehensive Solution

System integration reduces workload by streamlining enrollment and scheduling.
- No dual entry and set-ups required
  - Database automatically consolidates CAM/HA clients
- Flexible client enrollment and equipment assignment:
  - CAM only
  - CAM + HA
- Agency settings default to the client level
- System automatically copies daily schedule information:
  - Repopulates with default schedule until changes are made
  - Provides editing, copy, and delete features
  - Lets you view past schedules to review or modify
- Historical change views

Expanded daily reporting features confirm presence/absence compliance.
- Continually checks for presence in or absence from the home
- Online Event Log
- Daily Summary Reports delivered to e-mail
  - Includes scheduling option
  - Designates delivery time and days
- At-a-glance Usage Report statistics
- Curfew events included in Non-Compliance Reports
- Online Immediate Notify Report
- Expanded Immediate Notification features:
  - Fax, page, phone, and text messages
  - Delayed and incremental notifications
  - Agent-level notification
- Enhanced Daily Summary delivery options:
  - Scheduling
  - Designated delivery time
  - Designated reporting days
- Automatic collection of performance metrics

Multiple alert-notification methods.
- Expanded Immediate Notification options:
  - Text and fax

Expanded supervision features.
- Client verification calls
  - Call center personnel initially verify alerts
  - Upon verification, forward to the supervising authority
- Lets you send messages to base station to communicate directly with client
- Enables customizable dashboard views
  - Alert-centric or client-centric
